- Delivery of merchandise to customers.

### Education

2014 -

#### Strathmore University

2019

Bachelors of Science in Informatics

2011 -

#### Sunshine Secondary School

2013

KCSE Grade: A-

2006 -

#### Olerai Primary School

---

## Major Projects

---

**M-Kono Prosthetic Hand:** A prosthetic hand controlled using an Android Application and an Arduino board. The project entailed receiving and interpreting vocal user commands using an Android application and converting it into hand motions using an Arduino board, servos and a 3D printed prosthetic hand. It was developed for my fourth year project.

**Compliment Bot:** A Python based Twitter bot that posts motivational tweets and automatically responds to users live on Twitter. The bot also sends direct messages and personalized tweets to its followers. <https://twitter.com/GoodFeelsBot>

**Weru3D 3D printer:** A project entailing the assembly of a fully functional 3D printer used in a business I started.

**Java Voice Launcher:** A Java based program that receives and executes vocal commands from users. The application made use of a Sphinx Java library to recognize and process vocal input into text that is then linked to user customized commands. It was developed for a software development workshop that I led.

---

## Interests

---

Art and design.

Film and video editing.

Skateboarding

---
